- • Assisted in managing student association brand visuals and event materials.

PROJECTS

- Personal Portfolio Website Development

Built a responsive full-stack personal portfolio using HTML, CSS, JavaScript, and Node.js to showcase design and development projects. Integrated contact forms, animations, and SEO optimization for better visibility.

- School Management System (Demo Project)

Developed a PHP-based management system for academic record tracking, user authentication, and automated reporting.

- Graphics Design Brand Identity Project

Created a brand identity package for a startup including logo, color scheme, and social media kit, improving client visibility and brand recognition.

- Joel Clothings – E-commerce Platform

Built a full-stack e-commerce application with product management, cart, checkout, and pricing logic.
Technologies: React.js, Node.js, MongoDB
Focus: Price calculations, coupons, and delivery logic

- Wolf Jewelers – E-commerce Platform

Developed a scalable e-commerce site for a jewelry brand with reusable backend logic.
Technologies: React.js, Node.js, MongoDB
Focus: Business logic reuse and API optimization

- Emma Kitchen – Online Food Ordering System

Built a role-based food ordering platform with multi-level admin dashboards and order processing.
Technologies: PHP, Tailwind CSS, jQuery, MySQL
Focus: Role-based access and order lifecycle management

- Lexus Library – Digital Library System

Developed a searchable online library with admin-controlled book management.
Technologies: PHP, MySQL, JavaScript
Focus: Search functionality and CRUD operations

- The New Times Abuja

Built a news and blogging platform with category-based articles and comment moderation.
Technologies: PHP, MySQL, JavaScript
Focus: Content management and user moderation.
